EXECUTIVE SUMMARY

As Counties contends with the continued effects of the COVID-19 pandemic, we propose a fast-track software solution to enhance the County's ability to track, manage, and report on various Health and Human Services projects and costs. Corecentra's GPRIM software tackles several challenges created by the pandemic with next-generation digital infrastructure, dashboards, and analytical tools.

This project qualifies for CARES Act funding, allowing the County to move swiftly to deployment.

There are several COVID-related applications for the software, which will manage as a 'single system of records' all COVID-related grants, HHS projects, and payments from start to conclusion. These include:

1. Granular management and analysis of grants and other monies allocated to HHS-specific COVID response efforts (e.g. how much was spent on PPE for test sites, funds for contact tracing, etc.);
2. Robust tracking of COVID-related projects, services, and activities and the associated costs, with information automatically 'rolling up' from the project-level to hierarchical reporting levels;
3. Tracking of CARES Act-related project worksheets, invoices, payment schedules & status, and other compliance docs, to **accelerate filing, reimbursements, and appeals** (if necessary);
4. Rich dashboards with real-time social, health, economic, and financial performance and risk updates for CARES Act reporting purposes, County finance review, and other regulatory and compliance requirements;
5. Provide full audit and compliance capability for COVID-related documents, costs, utilization, and impact/performance yields;
6. Track real-time profit and loss for grant-supported County projects;
7. Operations management for COVID response projects, with built-in features to assign and monitor tasks, action items, and risks;
8. Real-time / near-real-time integration and display of performance data from fixed and mobile test sites, contact tracing, and other COVID-related health initiatives.

Our goal is to accelerate the flow of high-quality COVID-related analysis and reporting to / from HHS and various sources and stakeholders (e.g. County Executive's office, Finance Dept., community partners).

We have also included suggestions for future work beyond Phase I to address critical needs related to comprehensive data aggregation, seamless integration of 'niche' IT systems, and resource & financial tracking across the county. **At full deployment, Corecentra would allow county leaders to i) receive real-time updates to make proactive decisions and ii) leverage insights to improve services.**

In light of the extraordinary demands placed on the County during this crisis, we are proud to offer this Phase I solution at a heavily discounted rate: **\$49,500, a 90% savings** based on our standard fees.

We are standing by to answer any questions or provide additional information. Please do not hesitate to contact our CEO, Anish Nagar, at anish.nagar@corecentra.com or (281) 685-3265 with any thoughts or questions. Thank you for your time and attention.
